```
The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of aisorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. athritis), neurological disorders (e.g. Alzehmer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. athreosclerosis), conference disorders (e.g. asthma) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             106
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           252

RMEP and its DNA are used for diagnosing, treating and preventing nervous system disorders (epilepsy, dementia, stroke, Alzheimer's disease, Huntington's disease, Parkinson's disease); prion diseases; fatal familial insomnia, nutritional and metabolic diseases; of the nervous system; inherited, metabolic, endocrine and toxic myopathy; mental disorders (mood, anxiety, schizophrenic disorders) amnesia and Tourette's disorder; autoimmune/inflammatcry disorders (AIDS-acquired immune deficiency syndrome, allergies, anaemia, asthma, gout,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hillman JL;

A;Title: Cloning and structural analysis of the mouse apolipoprotein B mRNA editing FA; Reference number: JC4269; MUID:95408299; PMID:7677778
A;Molecule type: mRNA
A;Molecule type: mRNA
A;Molecule type: mRNA
C;Comment: This protein belongs to the cytidine deaminase gene family.
C;Comment: This protein B mRNA editing enzyme, catalytic chain 1
C;Keywords: hydrolase; zlnc finger
F;48-96/Region: zinc finger HHCC motif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ---AsnArgGlnGlyLeuArgAspLeuIleSerSerGlyValThrIleGlnIleMetThr 145

apolipoprotein B mRNA editing enzyme, catalytic chain 1 (EC 3.5.4.-) - rat C;Species: Rattus norvegicus (Norway rat)
C;Date: 02-Aug-1996 #sequence_revision 02-Aug-1996 #text_change 18-Aug-2000
C;Accession: 159577
R;Teng, B.; Burant, C.F.; Davidson, N.O.
Science 260, 1816-1819, 1993
A;Telle: Molecular cloning of an apolipoprotein B messenger RNA editing protein. A;Reference number: 159577; MUID:93289362; PMID:8511591
A;Accession: 159577
A;Accession: 159577
A;Residue; preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mRNA
A;Residues: 1-299 cRES
A;Cross references: GB:L07114; NID:9467808; PIDN:AAA17394.1; PID:9347165

Submitted (OCT-2001) to the EMBL/GenBank/DDBJ databases.

- I- FUNCTION: ESSENTIAL COMPONENT OF THE NUCLEAR PORE COMPLEX.

THE N-TERRINAL IS PROBABLY INVOLVED IN NUCLEOCYTOPLASMIC
TRANSPORT. THE C-TERMINAL IS PROBABLY INVOLVED IN PROTEIN-PROTEIN

INTERACTION VIA COLLED-COLL FORMATION AND MAY FUNCTION IN

ANCHORAGE OF P62 TO THE PORE COMPLEX.

THE TRANSPORTER. DURING MITOTIC CELL DIVISION, IT ASSOCIATES WITHIN

THE POLES OF THE MITOTIC SPINDLE.

THE POLES OF THE MITOTIC SPINDLE.

--- DOMAIN: CONTAINS F-X-F-G REPEATS.

CHAIN SITES PREDICTED FOR THE ENTIRE PROTEIN, AMONGST WHICH ONLY

3 x 11 AA TANDEM REPATS OF P-L-P-E-E-
P-P-[TME]-[MTG].
7 x 7 AA REPEATS OF P-S-R-S-R-[TS].
      sequence: 5'-6A[GT]AN[CG][AG]CC-3'. Might protect cells from apoptosis. Might be involved in pre-mRNA splicing (By similarity). SUBCELIGIAR LOCATION: Nuclear (By similarity).
ALTERNATUS PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.
TISSUE SPECIFICITY: Widely expressed.
DOMAIN: Contains 8 types of repeats which are distributed in 3
                                                                                               -i- SIMILARITY: CONTAINS 1 G-PATCH DOMAIN.
-i- SIMILARITY: CONTAINS 1 DRBM (DOUBLE-STRANDED RNA-BINDING) DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                13 x 10 AA TANDEM REPEATS OF L-A-[ST]-

Patent No. 6087108
GENERAL INFORMATION:
APPLICANT: Bandman, Olga
APPLICANT: Goli, Surya K.
TILE OF INVENTION: NOVEL RNA EDITING ENZYME
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSE: Incyte Pharmaceuticals, Inc.
STREET: 3174 Porter Drive
STREET: CA
STATE: CA
COUNTRY: USA
SEQUENCE CHARACTERISTICS:
LENGTH: 190 amino acids
TYPE: amino acid
STRANDEDNESS: single
TOPOLOGY: linear
